

Getting dental care to your students is essential. We're ready when you are.

We know the COVID-19 pandemic has caused a lapse in the ongoing health care of your students, including dental care. Please know that we are continuously monitoring CDC guidelines and working in conjunction with leading dental academics to develop health and safety protocols to make sure your school, staff and students, as well as our clinicians, stay safe while providing the dental care your students need now more than ever.

Following are answers to some questions you may have:

Q. What are your COVID-19 procedures for your staff?

A. All of our clinicians are required to take their temperature and complete a COVID-19 questionnaire every morning prior to leaving their home. If a team member has a temperature at or above 100°F, or answers yes to any of the COVID-19 questions, they are not to go to the school.

Q. Is your staff vaccinated?

A. All of our dental clinicians meet or exceed federal, state, local and/or district/school requirements for vaccinations.

Q. Will your staff be wearing face masks?

A. All dental clinicians will be wearing a standard face mask at all times while inside the school.

Q. How are you keeping students and dental clinicians safe during treatment?

A. All clinical staff are required to wear either an N-95 mask or a face mask and eye protection when providing clinical care.

Q. Are you adding any safety protocols for the children receiving care?

A. Yes. All children being seen by the dental team will have their temperature taken prior to treatment. In addition, all children will be

observed to ensure they look to be in good health. Any child with a temperature at or above 100°F or who does not look well will be brought to the nurse or office.

Q. How will the clinical area you set up in the school be modified for COVID-19?

A. We are asking schools to provide a larger than usual space, roughly 20' x 20', to allow for greater distancing of both treatment and waiting areas. In addition, we will be bringing fewer children to the treatment area at any one time.

Q. Will you be providing restorative care?

A. Yes. Wherever possible, the dental teams will be using minimally invasive techniques such as applying Silver Diamine Fluoride (SDF). When aerosol production is anticipated, we will be using four-handed dentistry as well as high-volume evacuation and other aids to reduce/control aerosols.

Q. What about children who are virtual on the day of the dental visit?

A. We know most children have not received dental care during the pandemic. Our goal is to provide dental care to as many children as possible. As such, we hope schools will allow children who are learning virtually on the day of our visit to be brought to school to get care.

Please know that, as always, we are here for you. If there is anything we can do to assist you in ensuring your students stay healthy, please do not hesitate to ask. Have additional questions? Call 888.833.8441
